

26 February 1986

MEMORANDUM FOR THE RECORD

SUBJECT: INTERNET - OTI Review on 24 February 1986

STAT

Attendees:

1. Overseas Telecommunications, Inc. (OTI) reported the following items:

a. A preliminary report on the microwave tail would be obtained this week. There appears to be a reasonably good chance that the single hop 6 GHz from Quantico to the International Hotel building in Reston might be cleared.

b. OTI will determine what costs, if any, will be associated with getting power into the Quantico site. Their point of contact is Sam Ward of the Rural Electric Association.

c. OTI will establish the power requirements and provide these numbers to FBIS so that the emergency generator can be sized and procured.

d. OTI will generate an overall schedule and provide it to FBIS next week.

e. OTI has decided to refurbish the existing building as opposed to building a new structure.

f. The "coordination notice" for the Earth Terminal has been filed and should be ready for a F.C.C. license application toward the end of March. The same process will take place for the microwave tail as soon as the actual link is established.
